## **Xiaomi MIJIA Graphene Folding Electric Heater with Voice Control Unveiled in China**

2022-09-28

Xiaomi has launched the MIJIA Graphene Folding Skirting Board Electric Heater Ultra-Thin Model in China.

The new electric heater is available for pre-order from September 14. The heater is rated at 2.22kW and can raise the room's temperature by 5°C in ten minutes. It can be folded in half making it compact for easy storage. The heater is 6cm thick and 1.5m long when unfolded. The heater's panel can be folded at 90 degrees as well.

The MIJIA Graphene folding electric heater uses a 1.29m heating element made from graphene for more efficient heating. Xiaomi says the heating method provides comfort to the skin as the skin is not likely to be dried.

It maintains a constant temperature while an overheating protection switch is an added safety layer. Users can adjust the temperature via the heater's touchscreen. You can also set a timer for up to 12 hours using the touchscreen. It can also be controlled by Xiao AI voice commands or the MIJIA app.

The Xiaomi MIJIA Graphene Folding Skirting Board Electric Heater is offered at an introductory price of 799 yuan (\$115). The original price of the electric heater is 899 yuan (\$130). Xiaomi has not provided any global availability and pricing details yet for the product. It is also unclear when the first deliveries will be made after the pre-order process kicks off.
