

## **Goodfellow Cambridge Introduces New Graphene-enhanced Composite Materials**

2023-04-25

Goodfellow Cambridge, a UK-based supplier of specialist metals and materials to the scientific and industrial manufacturing sectors, has recently introduced several new products, including a composite material consisting of graphene.

The new product reportedly boasts remarkable mechanical properties, along with outstanding biocompatibility. The Company's exclusive range of products, Hastalex and BioHastalex, are only available to its existing customer base.

In a recent interview, [Goodfellow Cambridge](#)'s CEO, Simon Kenney, also mentioned that the Company is a member of the BSI [UK](#) graphene group. The group aims to “conduct research into how standards can help support [UK](#) innovators accelerate the rate of commercialization of graphene applications”.
