## Graphene Square Electronics Launches Crowdfunding Campaign for Its Kitchen Styler

2023-05-24

Graphene Square Electronics has launched a crowdfunding campaign on Kickstarter to raise funds for what the Company calls "the first graphene powered appliance - Kitchen Styler".

According to Graphene Square Electronics, it is the "first and only appliance to use graphene as its sole source of heat". It is said to use CVD graphene in its design.

Those who wish to experience cooking with graphene can contribute to this project and help kick off this novel application. The Graphene Styler appears stylish and innovative, but it does come at an unusually high cost - \$2400 full price (now offered for \$1800).

The [campaign](#) has already passed its ask - with almost 2 months more to go. However, this can be explained by the extremely low goal set by the Company, of \$5,000.
